Most of us tend to glance through the manual when we first get our spanking new machine and experiment a little with the settings, then end up picking a couple of settings to stick with forevermore. All the different buttons, symbols and timings might seem daunting, but it's worthwhile to know how to make the most out of your washer dryer to save you time, energy, money and also, wouldn't you want to take the best care of your clothes You can also use this function to wash out stains, just be sure to first try removing the stain while it's fresh by dabbing it with a bit of soap water before popping it in the wash. It pretty much guarantees that you'll never have to wash any laundry by hand ever again. To keep things simple, here are 5 easy to remember categories Cottons Standard washing programme for textiles made of cotton or linen EasyCare For textiles made of synthetic materials or blended fabrics Mixed Load For washing natural and synthetic textiles together in a single load HygieneCare Pretreat dry laundry by hot air followed by a low temperature washing cycle to achieve the most hygienic wash results for nondelicate fabrics. Drum Clean To maintain the hygiene of the washer drum and remove residual lint. Materials such as wool or silk may be on the nono list, but its good to check the labels and make a mental note of items that cant go in the dryer. There are two different types of drying programmes Gentle and Intensive so pick the one that suits your needs. Regular cotton items or lighter clothing would be more appropriate for a Gentle Dry, while towels and sheets would be better suited for Intensive Dry.

Now that you know all that your washer dryer can do, I bet you can't wait to try out a new setting with your next load of laundry! As a general rule of thumb, always follow the temperature and wash programme selection instructions on the care label to keep your clothes in tiptop condition. A dishwasher washes dishes and utensils both quickly and precisely, giving you the luxury of relaxing at home without having to worry about washing up after your meals. The best way to reduce water and energy usage is to simply learn how to operate home appliances such as your washing machine in a resourceefficient way. Here are 4 easy steps to get you started. The spin may not be able to run correctly if this happens. We would recommend putting items of varying sizes in the same load to assist with this. If you have tried it, or do and this doesnt change, a service call may be needed to look further into it for you. If you need any more help, feel free to contact us on 1300 369 744. Regards, Bosch Home Australia Like Report paully2012 10 months ago Have you checked the pump filter to see if there is debris possibly stopping the pump which in turn will cause fault. I had a couple of bobby pins stuck. We recently moved house and during the move the back oval pannel in the middle of the machine fell off. I cant see a logical way to reattach it. It has place for 1 screw at the bottom. I would love to know how to reattach. I cant tell if it is supposed to tuck into the machine or just the one screw holds it in place on the outside. For anyone following along at home, you tuck in the top of the oval and the bottom then gets screwed in on the outside. Is there a trick to this or do I just turn to left by 60 degrees then pull harder. Like Share More 1 answer Diver Dean 2 years ago I also had this experience the first time I attempted to remove the plug. The reason was a buildup of debris. Some force may be required to remove it. I have had my bosch washing machine for 9 years without any problems but now I find that even though I select cold wash on either cottons or easy care cycles, the clothes come out of the machine hot. The only input of water for the machine is from a cold water tap. Is my machine safe to continue to use. How can I fix this problem. Like Share More 2 answers Bosch H. Regards, BoschHomeAu Like Report Amba asked 4 years ago Maxx EuroWasher WAE18060AU I bought a Bosch front loading washer a few days ago from a secondhand dealer, who has a temper so Im too scared to ask him anything. Ive never had a front loader before and just wonder why there is so little water when a load is put through. My daughter who swears by front loaders says her machine fills with a lot more water. Is this normal for the WAE18060AU to use such a small amount of water and does it still clean effectively. Thanks for any advice.

Like Share More 3 answers Mary G 4 years ago Hi Amba, You should have a reference guide that tells you the various litres used for each washing option as they do vary. Eg. Are you using the quick wash option. That would reduce the volume of water used. Ive just sold my machine so no longer have my instructions and to be perfectly honest with you I used to switch it on and walk away so I have no idea how much water should be loaded. All I cared about was that they always came out clean. Perhaps test the different programs to see which best suits you. Like Report Amba 4 years ago Thanks for your reply, Mary G. I have been using the Quick Wash. I dont even know how to change it to another setting. Will try again today, but so far it seems like only a cup of water is entering the machine. The cycles are pre set to fill a certain amount of water depending on the load size, majority of the water filled into the appliance fills from the bottom and a small amount will pass over the door or the appliance to show you that water is entering the appliance. Provided that your tap is open sufficiently and the clothes are coming out clean this would signal that there is no issue

with the amount of water entering the appliance. If you have any further queries, please do not hesitate to contact our After Sales Support team on 1300 369 744 during business hours. Water goes on at start for approx 5 seconds then stops fillin water starts cycle need help asap thx Anna Like Share More 2 answers Kate 5 years ago HI Anna, the water is added at the start to help the machine figure out how heavy the load is expected to be.

It uses that data to figure out how much water to use for the rest of the wash. You will notice it uses more water as it goes through the wash cycles. That bit at the start does not represent how much it actually fills up when washing. It also uses the first few squirts of water to wet the detergent powder. Hope this helps.
